

qEV MAGNETIC CONCENTRATION KIT

FAST, AUTOMATABLE EV CONCENTRATION

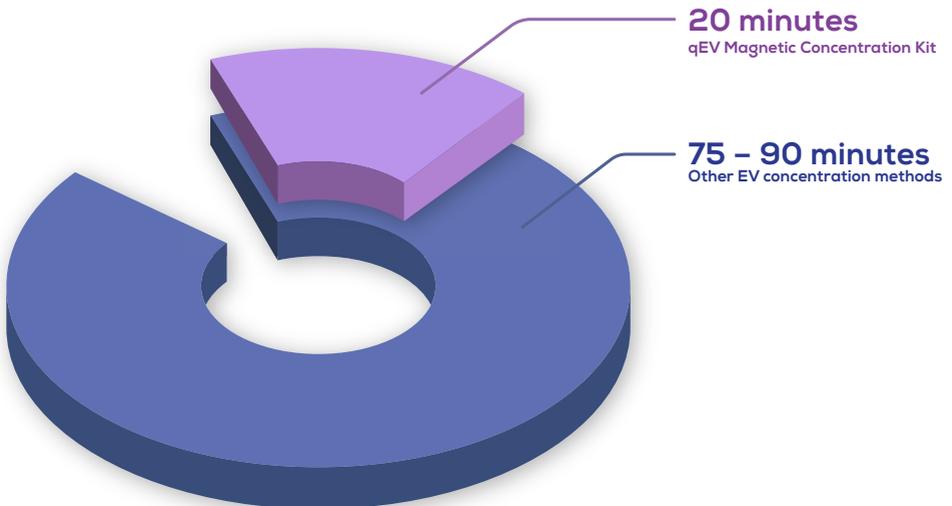

A new age of EV concentration is here: the qEV Magnetic Concentration Kit

- ▶ Concentrate EVs that have been purified using qEV columns.
- ▶ Using functionalised magnetic particles, you can concentrate EVs more quickly and cleanly than before – without the need for centrifugation or time-consuming protocols.

A quick and automatable approach to concentrating EVs

Why spend 75 – 90 minutes using **other EV concentration methods** such as centrifugal concentration filters?

With the **qEV Magnetic Concentration Kit**, you can concentrate your EVs in just 20 minutes.

Concentrate efficiently with the qEV Magnetic Concentration Kit

- ▶ All-in-one system for concentrating intact EVs
- ▶ Uses Magnetic Nanotrap® Extracellular Vesicle Particles functionalised with chemical affinity baits
- ▶ Does not require a centrifuge, making the qEV Magnetic Concentration Kit amenable to automation

What is the qEV Magnetic Concentration Kit suitable for?

- ✔ Omics studies (e.g., proteomics, RNA sequencing)
- ✔ Western blot
- ✔ qPCR
- ✘ Functional studies
- ✘ ELISA

CAPTURE AND CONCENTRATE
YOUR ISOLATED EVS.
